LEGAL NOTICE.

In the Probate Court in and for Salt Lake County, Territory of Utah.

In the matter of the estate of Joseph James, deceased.

Order appointing time and place to hear petition for distribution.

ON READING AND FILING THE PETITION of Thomas J. James, administrator of the estate of Joseph James, deceased, that he has filed his final account of administration upon said estate, and that he has been fully paid, and of administration upon said estate, and that a portion of said estate remains to be divided among the heirs of said deceased, divided among other things for an account of the final account and of distribution of the estate of said deceased, the court ordered that the Clerk cause notice of this order to be posted in three public places in Salt Lake County, and published in THE SALT LAKE HERALD, a newspaper printed and circulated in Salt Lake County, three weeks successively prior to said day of August 29th, 1886.

ELIAS A. SMITH, Clerk of said Court.

JOHN C. CUTLER, Clerk of the Probate Court in and for the County of Salt Lake, in the Territory of Utah, do hereby certify that the foregoing is a full, true and correct copy of the order appointing time and place for settlement of final account and distribution, in the estate of Joseph James, deceased, as appears of record in my office.

In witness whereof, I have hereunto set my hand and affixed the seal of said Court, this 24th day of August, A.D. 1886.

JOHN C. CUTLER, Probate Clerk.

R. W. DARR, Attorney.

H. E. Grow, ELECTROPATHIST,

INDOORS AND OUT.

The Farm, Orchard, Garden, and Household.

HINTS AND NOTES FOR ALL.

Holsteins—Colts—Raspberries—Apple Dampings—Rheumatism—Strychnine.

Unsuned rooms cause unsound health.

The milk must be clean to get good butter.

To remove mildew, soak in butter-milk and spread on the grass in the sun.

Starved shirts will iron easier if they are allowed to dry after starching, so that they require sprinkling before ironing.

It is now pretty well settled that bees want and ought to have salt, and plantings in bee culture suggests salt brine poured on sawdust placed near the hives.

Egg muffins should be made as follows: One and a half pint flour, half-tablespoonful each lard, sugar and salt, three eggs, one pint of milk, two table-spoonfuls of baking powder. Bake in a hot oven fifteen minutes.

Carriages and farm wagons might be made to last twice as long if only a few moments were spent each week during the wet weather in tightening up the bolts that hold the wagon together.

Where the hens are confined the best grass for them is that which is taken from the lawn mower, and especially if it is cut in short lengths. The lawn is usually seeded with mixed grass seed, and the hens can therefore be given a variety, but white clover is best.

Rheumatic and neuralgic pains can be relieved by the following mixture: One ounce each of aqua ammonia and alcohol. Dose, a small teaspoonful taken in a wineglassful of water three times a day after meals. Four doses are generally effective.

A growing inability to sleep in sickness is ominous of a fatal result; in apparent health it indicates the failure of the mind and madness; so, on the other hand, in disease or dementia, a very slight improvement in the sleeping should be hailed as the harbinger of restoration.

The American Bee Journal says tansy strewn around the hives is recommended by some bee keepers to keep ants and roaches away. A sponge wet with sweetened water might be put in a wire cage to destroy them. Borax, salt or gum camphor, or powdered cloves scattered where the ants or roaches congregate, will drive them away.

Sago custard is both nourishing and palatable. It is made by soaking two table-spoonfuls of sago in a half pint of cold water for an hour and a half, then boiling it in the same water until it looks clear; add a tumbler of sweet milk, and let this boil for a minute or two, and sugar to your taste; when taken from the fire add one well beaten egg and flavor to taste.

Too many farmers get less good than they might from their pear orchards, because they allow the fruit to ripen on the trees as they would apples. Few pears will be at their best if treated thus. Picked when fully grown, and kept in a warm or cool room as their ripening is desired to be hastened or retarded, the color and flavor of the fruit will be much better than if it were allowed to remain on the tree. Some of the best sorts rot at the core if left on the trees until the fruit begins to turn.

Look out for the "black knot" on the plum and cherry trees, says the Farm Journal. These knots are caused by a vegetable parasite called "Sphaeria Morbosus." It develops from spores which are wafted about by the wind. No tree is safe in the orchard where one tree is affected. When once affected it will not take long for the whole tree to become useless. The only remedy for this evil is to cut off all the affected branches and burn them. Nothing short of burning will kill the parasite.

Raspberries are very nice for winter use, but I find it much more convenient to keep them dried than canned. I prepare them by sprinkling sugar over them on plates, and then dry in the stove oven, after the fire is pretty well down, so as not to scorch them. They are quickly dried, and when done can be packed away in jars or even in thick paper bags. They are excellent for sauce in winter, and make good pies and puddings. The only precautions requisite are not to store them in a damp place, and to cover closely, so as to keep out insects. —Ex.

Breaking a sitting hen has been a problem, and hundreds of suggestions have been made in regard to the best method. Many of the proposed remedies are cruel and inflict unnecessary punishments on the poor hen for simply endeavoring to satisfy her natural inclination. The easiest made is to make a box composed of strips of lath. If lath, which is cheaper, have a top, sides and bottom of that material, and place the box on some kind of support, so that it will not touch the ground, or suspend it from a hook. There being a free circulation of air all around her, she will soon become disgusted.

Buttermilk biscuits are excellent if mixed—as the successful painter did his colors—with brains. A heavy hand and heavy wife can result in nothing but sudden solidity. One quart of flour, one table-spoonful of soda sifted three times with the flour, and a table-spoonful of salt, one pint of really sour buttermilk, one table-spoonful of melted butter. Sift flour, soda and salt into a bowl, stir butter and milk together and pour into a hole in the flour. Mix quickly and with as little handling as possible. Be careful on this point, also, not to get the dough too stiff. Have your oven ready and hot. As soon as the biscuits are cut out put them in and bake.

Holsteins will probably give a greater quantity of milk than any other breed of cows, but it does not possess the extreme richness of Jersey milk. But this lack of richness may be remedied by feeding corn meal or oil meal. What ever the Holstein cow gets in feed rich in oils, will come out in the cream, for while giving milk, no matter how highly fed, she will not fatten, and there is less danger of causing caked bag or milk fever by high feeding with Hol-

steins than with Jerseys, whose milk is naturally as rich as it can be on ordinary food. The forcing of large production is therefore better adapted to increasing the richness of milk already large, than to increasing the quantity of a small, but rich yield. —Boston Cultivator.

An Australian recommends in cases of animals poisoned by strychnine, an antidote so simple, so easily administered, and above all, so easily obtained at all times and in all places, that it is important that it shall be remembered, and tried. He says that he has never known charcoal to fall even in the worst cases. "I have traveled a great deal about Queensland," he says, "with stock, and have had many of my dogs poisoned, but if they were only alive, I did not care how bad they were for after administering charcoal, they were fit to follow in about an hour. It should be given in water or tea, whichever is handy." It can do no harm to try this antidote whenever occasion arises.

The disease in sheep caused by worms in windpipe and lungs, that seems to have been so prevalent in many flocks throughout Ohio, has a remedy it seems. But what causes these worms to lodge in the windpipe and lungs is yet a mystery, although there is a theory that the sheep in feeding on grass late in the summer, swallow the egg of a fly, these eggs being deposited on grass in low places during hot, sultry days. These eggs lodging in the throat cause the sheep to cough, and they are smothered in the windpipe and there hatch out, being fully developed in late winter. Another theory is that the fly lays eggs in the nostrils of the sheep, and they are smothered into the windpipe. Which ever theory may be correct, or if neither, it is a fact that the worm is lodged safely and will do harm if not removed. Turpentine poured into the nostril is a remedy, a half table-spoonful at a time; also tar put into the mouth. —Ex.

Of course it is understood that I am raising colts and horses for the money there is in them, and therefore endeavor to raise them with the least trouble and expense and still have them cared for, and grown well enough to readily sell at a reasonably fair price. I raise both spring and fall colts, and I think I can raise the latter earlier and cheaper, especially from work mares, besides by having rye or other early green feed for them after being weaned their growth is not checked nearly so much as is the case with colts weaned in the fall, which must of necessity subsist on dry and artificial food for several months. I do not usually allow my colts to follow their mothers when they are at work, but turn them into a box stall with oats and water, where they can help themselves, or turn into a field with some older colts they are acquainted with, where they soon learn to run quietly between meals. I usually halter break them by tying beside their mother for a few days while doing some moderate work, and find it much easier than wrestling with them after they become older and stronger. I prefer not to wean spring colts until cool weather comes in the fall, generally in October, and find they winter better than those that I buy and am forced to take earlier. I find it much harder to keep colts growing and thrifty the first winter than afterward, and feed them corn, oats, bran, middlings and roots, if I have them, with plenty of good hay, and usually fail to grow as fast or look as well as I wish them to. We do not tie weaning colts, but turn them loose into a warm box stall, and find it easier and more quickly done. I kept eight head last winter in a stall 12x16 feet, and they got along nicely together; we turn them out on pleasant days, and feed cornstalks in the yard at noon. If cold or stormy, we leave them out long enough to drink and have a little play, then put them back and water again at night. —Ex.

HOW BIG?

How big, how big is the little lass? Stand her up here near the window-glass. With her golden ring. And merry's a giggle (A giggle is a cricket in the grass.) Stand her up here and let us see How tall may the little maiden be.

Who would suppose she would outgrow Dresses and stockings and aprons so? Not only outgrow's Her pretty clothes, But to make herself tall, No measure! See, as she will lay On the silk locks, floating every way

She is just the height that's best of all— Neither too tiny nor too tall, Large enough quite To be polite.

A fair sweet lady, though, oh, so small! No small, such a mere little child, she may Be household baby for many a day. —Clara Doty Bates.

The Naughty Sun

Is always at war with the complexion. Guard against it as they will, ladies cannot avoid his disfiguring rays. They can, however, obliterate their effects by using at their toilets "GILSON'S SCARF AND SOAK." This marvelous restorer of female beauty is free from all the objectionable properties of the metallic washes in common use, being as poisonous as water. Beware of counterfeits. In this age of inquiry and analysis, no deleterious toilet article can succeed. See that "GILSON'S SCARF AND SOAK" is printed on each packet, without which none is genuine. Sold by druggists at 25 cents; three cakes, 60 cents. "HILL'S INSTANTANEOUS HAIR DYE" owes its popularity no less to the safety with which it can be used, than to the extraordinary beauty and lustre of the colors it produces.

A Most Liberal Offer

THE VOLTAIC BELL CO., Marshall Mich. offer to send their Celebrated VOLTAIC BELLS and Electric Appliances on thirty days' trial to any man afflicted with Nervous Debility, Loss of Vitality, Manhood, &c. Illustrated pamphlet in sealed envelope with full particulars mailed free. Write to-day at once.

Though pure and simple, and so mild, it might be used by any child. Yet MUZONON is so soft and pure that its skin and teeth with wondrous speed From tarter and from stain are freed Till they become sweet, white and pure.

Active, Pashing and Reliable.

Z. C. M. I. can always be relied upon to carry in stock the purest and best goods, and sustain the reputation of being active, pushing and reliable, by recommending articles with well established merit and such as are popular. Having the agency for the celebrated Dr. King's New Discovery for consumption, colds and coughs, will sell it on a positive guarantee. It will surely cure any and every affection of throat, lungs, or chest, and in order to prove our claim, we ask you to call and get a Trial Bottle Free.
